

Week 1 Project — Full Problem Statement

Project: Personal Course Tracker Page

A single HTML page where you log your own MERN course progress. Built so every topic on this week's ledger has a genuine reason to exist in it — nothing bolted on just to hit a checklist.

Required Sections & Features

1. Header section

- `<h1>` centered title: "My MERN Tracker"
- Colored `<hr>`, sized and centered
- A `<p>` intro using `<b>`, `<i>`, `<u>` somewhere natural (e.g. bold your name, italicize "MERN Stack", underline the course name)

2. Progress Table

- Columns: Week | Topics Covered | Status
- Use `rowspan` for any week with multiple topic rows (Week 1 has ~6 topics, so this applies directly)
- Proper `<thead>` + `<tbody>` separation
- At least one `colspan` row (e.g. a "Notes" row spanning all columns)

3. Habits Checklist

- `<ul>` listing the 11 habits from your manual, short labels not full paragraphs
- One item gets a nested `<ul>` sub-list (e.g. under "bug journal," nest 2–3 example bug entries)
- A separate `<ol>` for "this week's priority order" (ranked 1–5)

4. "Log a New Bug" Mini-Form (no backend needed, doesn't need to actually submit anywhere)

- `<fieldset>` + `<legend>`
- Text input (bug title)
- Textarea (description)
- Select dropdown (category: HTML / CSS / JS)
- Radio buttons (severity: low / medium / high)
- Checkbox (resolved: yes/no)
- Submit button

5. Resource Embed Section

- One `<img>`
- One `<iframe>` (e.g. a Google Maps pin of IUB, or a tutorial you actually used)
- One `<a>` link back to a previous page or external doc

6. CSS Pass (this is the actual point of the week)

- Internal `<style>` block — not inline attributes, that's the upgrade from your June 23 work
- At least 2 class selectors applied to different sections

- vh/vw used for at least one container's sizing
- One background using a named color, one using rgb()

Layout / Structure Map

Organization only — no design decisions made for you. Colors, spacing, fonts, boxed-or-plain, one column or two are deliberately not specified. Those are the CSS reps you're supposed to be building this week.

Centered H1: "My MERN Tracker"
Colored, centered HR
Intro paragraph — name, course, bold/italic/underline somewhere
SECTION: Progress Table
Week Topics Covered Status (rowspan where a week has multiple topics; colspan row at bottom for notes)
SECTION: Habits Checklist
11 habits (short labels), one item has nested with 2–3 examples — top 5 priorities this week
SECTION: Log a Bug (form)
fieldset/legend wrapping it; text, textarea, select, radio x2, checkbox, submit (stacked or grid — your call, that's a CSS decision)
SECTION: Resources
one img, one iframe, one external link
Footer, optional

Constraints

- 1 day max (3–4 focused hours)
- You build it, I only scope/review — no AI-written fixes
- If stuck 45–60 min with genuinely zero progress, one targeted conceptual question only ("what category of bug is this," not "fix this")

Time Estimate

Table + rowspan ~40 min · Form ~40 min · Lists ~20 min · CSS pass ~50 min · Polish/debug ~30 min ≈ 3 hours total
